

OFFICIAL LAUNCH
3 MAY 2022

Privacy Awareness Week

Professor Edward Santow
University of Technology Sydney

Edward Santow is Industry Professor, Responsible Technology at the University of Technology Sydney (UTS).

Professor Santow leads UTS' new initiative on building Australia's capability on ethical AI. His areas of expertise include human rights, technology and regulation, public law and discrimination law.

Professor Santow was the Australian Human Rights Commissioner from 2016 to 2021.

Artificial Intelligence and privacy: can they be friends?

We are living in a time of unprecedented technological change and trust in government has been consistently falling.

As this change upends almost every aspect of life, it's often said that we face a terrible choice: we can grasp the benefits of artificial intelligence (AI), but only if we sacrifice our privacy rights.

But what if the opposite is true? What if the best way to give us a future we want and need, and not one we fear, is to 'bake in' privacy protections for the products and services that rely on AI?

With a focus on the rise of facial recognition technology, Professor Edward Santow will suggest a way forward that puts privacy at the heart of how artificial intelligence is designed, developed and used and how this could improve trust for agencies.

Watch Online
from 3 May 2022
