

# MAKE PRIVACY A PRIORITY

## Tips for protecting your personal data

We live in a digital world. Knowing how to protect your personal data across multiple devices is as valuable as the data itself. Here are some simple tips:

### 1. Protect your information

- Think twice, post once when sharing information about yourself or others.
- Don't overshare. Be careful about what you put on the web. It's on there forever.
- Place contactless cards in RFID protective sleeves, wallets and purses.

### 2. Look for terms and conditions

- When signing up for a new service or app, know what you're agreeing to.
- If you're unsure why an agency is collecting particular information, ask them. They should tell you why they need that information and what they're going to do with it.

### 3. Keep security top of mind

- Don't click 'yes' to your computer remembering any password, especially not those used for banking, social media or email accounts.
- Secure personal email accounts by setting up and using multi-factor authentication.
